## Deploy Kilowatts in Minutes with PowerFunnel!

Patents Pending

- Factory assembled and tested
- Arrives at site ready to deploy
- Installed and operating quickly
- One snap-connector wires units together, no tools required
- Electrically inert plastic structure, safer to install
- Easily scalable, from a single unit to as many as you need
- Ground mount: no holes or loads that can damage a roof
- Easiest maintenance, highest possible output

**S**olar power is taking off, not just because of the “green” benefits, but because it makes sound economic sense. **In rural areas where power is more expensive, the benefits of solar power are even stronger.**

You’ve probably seen solar installations on rooftops, but did you know that if you have property, you have a terrific advantage in getting the best economic value from solar? **A system on the ground has benefits that can’t be matched by rooftop approaches.**

Trouble is, building a ground-mounted solar installation is time consuming and complex.

Well, not anymore.  
Now there’s PowerFunnel.

### What is PowerFunnel?

Simply put, PowerFunnel is like a completely integrated solar LEGO® Brick.

Each PowerFunnel includes the solar panel, electronics, cabling and mounting structure needed to provide usable AC or DC power all by itself or in sync with other units.

Just place PowerFunnel facing south, add a bit of concrete in its base, and professionally wire to the grid.

Need to make a change after installation? Built-in forklift tubes allow a unique ability to move PowerFunnels even after install.

# On or off the grid, PowerFunnel has you covered

Need to power a home, barn, shop, or out building that's connected to the grid? Our flagship model provides 240Vac split-phase power, two circuits of 120Vac that's the same you have in your home right now.

What about electric fences, gates, deer blinds or feeders that need 12V or 24V DC power? Our 1224DC model has a built in charge controller. Just place your existing battery inside the PowerFunnel (if desired) and run appropriate wiring to the system you are powering.

For larger off-grid applications or for use as a retrofit in existing higher-voltage DC systems, the HVDC model is a perfect and cost effective fit.

PowerFunnels can be shipped efficiently and safely because they stack one inside another like shopping carts during transit. This also means less onsite trash, better for the environment and your wallet.

## PowerFunnel Configurations

Model	260Wdc Panel	Integrated Mounting	240Vac Grid-Tied	12Vdc 24Vdc Charging	Direct Panel DC Output
PF1000-260-240AC1P	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>		
PF1000-260-1224DC	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>		<input checked="" type="checkbox"/>	
PF1000-260-HVDC	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>			<input checked="" type="checkbox"/>

New product configurations are in development, including units with integrated battery storage, 277Vac single phase and 480Vac three phase, and both larger and smaller output ratings. Check back with your salesperson or our website [www.powerfunnel.com](http://www.powerfunnel.com) for the latest product information.

## To Find out More About PowerFunnel

We are continuously expanding our network of dealers, installers, and retailers. For the latest information, including your options for getting PowerFunnel on your property, visit us at [www.powerfunnel.com](http://www.powerfunnel.com), or call us at **(800) 590-4050** and we'll be glad to help you out.

Dealers, Distributors, and Installers: We'd love to talk and show how PowerFunnel can help you with your business.

Call us at (800) 590-4050 or email us at [dealer@powerfunnel.com](mailto:dealer@powerfunnel.com).
